

The **SCIENCE**
of "Better Water"

PRODUCT SPECIFICATIONS

Hydrogen Activation Unit (HAU)

UNIT I.D.	SIZE	FLOW
HAU-100	1 in.	25 GPM
HAU-200	2 in.	85 GPM
HAU-300	3 in.	170 GPM
HAU-400	4 in.	300 GPM
HAU-600	6 in.	700 GPM
HAU-C	Custom	—————

Normal Pressure Differential: In standard installation expect 7-10 lb. Pressure drop (or less). Pressure may vary for custom installation.

INSTALLATION

Installation performed by BBC authorized service agent.

New unit purchase includes standard PVC installation at no charge. All fittings are paid by client.

Special existing site installation conditions will incur extra charges to be approved by client prior to installation.

BEAD Maintenance & Replacement — Contact BBC sales representative for contract details.

ALLGONE LLC

HYDROGEN ACTIVATION WATER TREATMENT

A liquid conversion process that changes the composition of ordinary water.

Up to 50% Less Water
Less Fertilizer/Chemicals
Greater Yield Potential
Healthier Crop
Profit Increases

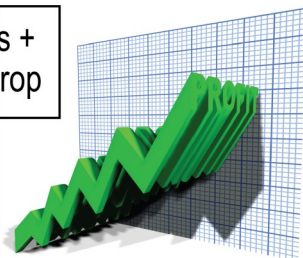

HYDROGEN ACTIVATION WATER TREATMENT SYSTEM

The AllGone HA unit offers a 21st century solution for the many challenges facing agronomists and farmers today. Ceramic ore resonance activation technology enhances water at the molecular level. This energized water yields dramatic results in agronomy including:

Less Water + Less Fertilizer/chemicals + Loam Enhancer + Healthier/tastier Crop

BOTTOM LINE: INCREASED PROFIT MARGINS

APPLICATION QUALITIES

“Wetter Water” (Lower surface tension)

Better absorption by plant and soil

Water Reduction (Up to 50% less) due to more efficient moisture utilization

Less Fertilizers/Chemicals (25% or more) High soluble water = efficient distribution

Soil Conditioning / Soil Nutrients Helps increase “loam” effect of soil Better drainage; less standing water Improved soil nutrient levels despite less fertilizer usage.

Reduced Salt Accumulation

Eliminates damage from increased salt TDS levels in deep aquifer irrigation water. HA water drives salt below root zone.

Product Quality / Yield Maintained or improved yield (15%+) Enhanced product quality and health

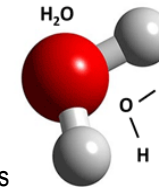

Ceramic “bead” Ore

Water is the building block of life because of the polarity of the H₂O molecule. This polarity creates hydrogen bonds between molecules, which results in important life-giving characteristics of water—its solvent action, adhesion, cohesion, and more. HA technology utilizes cutting edge ceramic resonant treatment beads to enhance the effect of polarization and hydrogen bond formation and thereby increasing these key benefits. HA water is simply “better” water.

HOW IT WORKS

HA is a liquid conversion process that changes the composition of ordinary water. Water is comprised of hydrogen and oxygen atoms. The HA unit utilizes a resonance technology to “activate” the hydrogen element. When this occurs, it enhances the “effect of polarization” and hydrogen bond formation, which occurs as water is streamed through special sintered ceramic ‘bead’ ore clusters housed in the “Patent Pending” HA activation chamber. This process has a unique fundamental enhancing effect on the water molecule with powerful benefits to plant health.

HEALTHY “ACTIVATED” WATER results!

SOIL IMPROVEMENT

Our Hydro Activator helps create ideal soil texture conditions. The HAU causes efficient soil surface tension reduction, triggering increased absorption and soil salt dissolution. This action also increases the crop's water and nutrient absorption capacity, resulting in higher and healthier yields.
